# Coding techniques to learn

Opening image in the same page as an overlay and gallery scrolling. Both will be used for viewing artwork, giving the user the ability to quickly navigate a longer page of images.

Usable contact forms and printable links. Used specifically for the contact page to send and receive messages as well as access a printable resume link.

Embedding YouTube videos. Not actually sure if this is possible, but it would be helpful to show off some animations this way.

Overlay gradients. Not sure if this is a thing either, but opacity gradients would be neat to know.

Sticky nav bar.

This seems like it would be really simple, but as of now I am unsure of how to do it.

Integrating JavaScript functionality in html. Also probably very simple, but I don't know it and it would be very useful to learn.

# Post Design Notes

Of course, the final design is not quite what I had planned. There were a lot more issues that I ran into than I expected, so I focused more on streamlining what I needed and let go of the parts that were giving me trouble.

I referenced a lot of code that had been used in assignments, but I altered them so that it worked for what I needed. Specifically, I looked at the flex box, grid, form, and other minor coding techniques.

The flex box was helpful in making the header, even though it was also giving me difficulties. I worked around alignment issues by putting an empty div in the middle to separate the items on the left and right.

The grid came in use with the gallery of images, and though I couldn't quite get the square sizing of them or the window pop-up zoom, I did manage to make it so the images open in a new tab, which was along the lines of what I originally wanted

I was also able to make the fill-in form more personalized by changing such things as the colors.

There were still a lot of techniques I wanted to learn and use, but as I was still having great difficulty with the techniques I already knew, I decided to discard them to focus on learning all that I could about the tools I already had.
